

Harps Installation Criteria

1. Location type: An inspiring, open, windy landscape in the city or in the countryside
2. Setup: on a tripod secured with screws or weights, or anchored directly into the ground

Example in the city: on a rooftop in a wind corridor, with the harp mounted on a tripod screwed to the building

Example in the countryside: in a field, with the harp mounted on a base plate anchored 60 cm underground with a steel spike

4 options on-site electrical and internet connection requirements, in order of preference :

We are counting on your cooperation to help us find the best location for the harp, taking into account the need for adequate wind access in a suitable landscape, as well as access to electricity and the internet for streaming sound and surrounding climate data.
